

## Make people the foundation of every business decision

ChartHop is the AI-powered people operations platform that connects workforce, business, and financial data so organizations can plan smarter, operate with clarity, and make confident decisions about their people.

## Bring the power of AI to your people data with ChartHop:

**AI-native copilot:** Ask ChartHop provides conversational answers inside the HRIS module and builds workforce reports and proposes actions across the entire platform. AI is present where the work happens so teams move from asking to acting.

**Access Guard and data trust:** Enterprise-grade controls ensure AI can only see what the user is allowed to see. Guardrails show supporting source views so answers can be verified. Customer data is never used to train foundation models.

**Unified people graph:** All HR, job, and business fields live in one flexible model with custom fields and calculations. AI interprets that schema to provide context-aware insights that reflect how your org is structured in real life.

**Agentic workflows:** Impact Buttons and suggestions trigger summaries, trend detection, and scenario creation from any dashboard or review cycle. Routine analysis and handoffs are automated so HR can focus on exceptions and decisions.

**Scenario planning built in:** Generate and compare headcount plans, budget tradeoffs, and org changes. Run what-if scenarios in minutes and publish the approved plan to live systems.

## Platform Benefits

### Centralized people data

A single source of truth with all employee data accessible from a single profile

### Conversational answers

Get answers about people and business data with Ask ChartHop

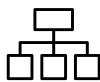

### Embed AI Insights

Add AI insights and summaries to dashboards

### Preboarding, onboarding, and offboarding

Configure with custom forms, signatures, tasks, and messages

### Dynamic org chart

Explore your organization interactively and easily understand relationships

### Live dashboards & analytics

Keep your headcount plan and budget impact always in sync

### Access & security

Stay secure with SSO configurable login and customizable role-based access
